PHOTOLUMINESCENT SOLUTIONS TO SAVE YOU TIME, MONEY AND MINIMIZE RISKS

In any arena or stadium, safety and comfort plays a major role in the patron's overall perception of the event and venue. With the responsibility of more than 12,000 people per event, the facility management of Boise State University's Taco Bell Arena chose Ecoglo step edge contrast strips to give each and every spectator the visibility and confidence to enter and exit the arena seating area safely, even under emergency conditions.

The installation of more than 3,000 step edge strips was quick and simple. It required no electrical work and even now remains maintenance free for decades to come.

With the advantage of Ecoglo's hard-wearing non-slip, long-lasting glow and environmentally-conscious design, Taco Bell Arena joins the list of dozens of arenas and stadiums worldwide that offer Visibly Better emergency egress and step safety.
